

Data Grid Webinar Q & A

Q: Will every user in Escape Online 5 have access to grids, particularly down to the school site (e.g., school secretary, principal, etc.)?

A: Yes, if a user has access to an activity, the user will have access to the data grid.

Q: Will we be able to save more than one data grid format in a future release?

A: Currently, you can only save one format per activity. We are currently researching this. We are planning to add this functionality in a future release.

Q: Will the full SSN be available on the employee data grid?

A: No. Escape Technology is aware of the security necessary to protect personal data. That is why we use masks for social security numbers and only print the full social security number on specific reports that require it for governmental or other reporting purposes.

Q: When you add columns to the grid, where are they added?

A: If the column is part of the default (from the list), the column will add/drop from its default location. If the column is added from the chooser (right mouse click on a column heading), it will add to the end of the list.

Q: What does Reload do?

A: Reload re-applies the saved format. So if you open a grid in a saved format and then make changes, you can use the Reload option to reload your saved format.

Q: When will the new grids for vendor requisitions be available?

A: In release 10.04, available in mid-August, six more activities will have the full grid functionality (the ability to add/drop columns from the table): Vendor Requisitions, Fixed Assets, Vendors, Employee Pay Management, Employee Payroll Setup, and Adjust Payroll.

Q: What about other activities? How do we suggest an activity be “next” on the list?

A: We are currently determining the list of activities to receive the expanded grid functionality for the 10.05 release, available in mid-October. If you have a suggestion, please let your Escape Customer Care representative know. We are always interested in your feedback.
